10
-13. The plug of claim 6, with said:

locking means comprising a sidebar movably borne by said plug with an edge of said sidebar disposed to engage the cylinder; and

electrical operator comprising an electrical coil coaxially aligned with said distal member, to displace said distal member from said first position to said second position in response to said control signals; and

said distal member bearing a circumferential surface blocking said radial movement of said sidebar while said distal member is in said second position, and a groove in said circumferential surface accommodating said radial movement while said distal member is in said first position.

REMARKS

Claims 1 through 13 are pending in this application. Claim 13, dependent upon independent claim 6, is are newly added to further define the elected species. The structure defined by claim 13 is deemed to be patentably distinguishable over the art for the reasons set forth in Applicant's earlier filed response.
